

LESSON 3 – ASSIGNMENT

1. List freshwater and saltwater aquatic species that can be farmed under aquaculture management in **your country**. Be careful not to include those species illegal in your country. Contact your local government body responsible for aquaculture to get local details.
2. Make a list of as many freshwater fish and other creatures as you are aware of that could be grown using aquaculture principles in **your locality**.
3. From the sources you have contacted, obtain detailed information on one species used in aquaculture and write a summary on the costs and expenses necessary to run the farm. Submit up to 2 pages.
4. Describe the cultural requirements of one type of salt water fish which has commercial potential for farming, in a climate similar to your locality. Write no more than half a page.
